## INUVIO Announces Electronic Signature and Form Builder Solution New ScanSign® Software Application

*Available in Both Integrated and Standalone Versions*

**Plano, Texas, June 4<sup>th</sup>, 2012** – INUVIO announces the development of a new electronic signature and form builder solution. This new product is called ScanSign® and is available in both integrated and standalone versions. ScanSign® incorporates electronic signature and data capture, binding, authentication, and verification of digital documents into the already powerful ScanSharp® imaging and Optical Character Recognition (OCR) product line. Thousands of businesses across the world are saving time and money by replacing paper processes with electronic signature and document solutions. Why not join them? Existing full-size documents and forms such as medical forms, financial documents, and security credentials can be easily loaded or scanned into the ScanSign® software for electronic signature and data capture and binding. The resulting digital document contains the original document, electronic signature, user input data, and a date and time stamp for authentication, all in one. ScanSign® works seamlessly with all the other INUVIO™ products including ScanGlobal® for IP / LAN / WAN networking and remote server access and storage.

“The days of a medical practice, financial institution, or security operation handing someone a clipboard are over. Our new ScanSign product allows end users or software integration partners to process required forms and gather customer data electronically on their choice of hardware from signature pads to tablets to touch-screen PCs, etc. No more print, sign, scan, shred, and repeat. What a waste of time and money. The future is electronic forms with fill-in-the-blank, check box, and signature data captured digitally”, explained David Miller, Vice President, Sales and Marketing, INUVIO.

ScanSign® documents can capture signatures from any electronic hardware such as USB signature pads or digital device such as smart phones, tablets, touch-screen PCs, and even a mouse. INUVIO's EcoSign® line of USB signature pads in a wide variety of shapes, sizes, and price points are a perfect match for the new ScanSign® software and offer an industry-leading 24-month warranty. The standalone and integrated versions of ScanSign® include features such as electronic signature and data capture, binding, and authentication, form builder, "check box", "fill in the blank" and "auto-populate" with any existing PDF or scanned document. The resulting PDF documents include legally defensible digital signature/s and date/time stamp. ScanSign® meets "Meaningful Use" and EHR/EMR requirements and can be combined with INUVIO's ScanGlobal® product for RDP Terminal Services or Citrix networking and remote server storage. The ScanSign® Software Developer's Kit (SDK) allows integration with business management applications such as Practice Management (PM) and Electronic Health Record (EHR) systems to pull data and auto-populate documents prior to them being edited and/or signed. Applications vary from healthcare to financial to security to small office, and beyond.

"ScanSign adds full electronic signature and form building capability to our existing line up of scanning and Optical Character Recognition solutions for healthcare and many other markets, partners and customers. ScanSign can be used as a standalone product or fully integrated into any third-party partner application such as Practice Management and Electronic Health Record systems. Partners can integrate their choice of features such as digital signature, check boxes, fill-in-the-blank, field auto-population, and more. ScanSign is a powerful solution for our customers and product enhancement for our integration partners", stated Dr. Daniel J. Moulton, Founder and CEO, INUVIO.

INUVIO is proud to have partnered and integrated our technology with some of the largest IT solutions providers and enterprise systems such as PM (Practice Management), EHR (Electronic Health Records), CRM (Customer Relations Management) and others in the world. Our partners are integrators, developers, and resellers from around the globe. The integration of our SDK (Software Development Kit) with their software applications creates a powerful imaging and data capture solution that recognizes, translates and transfers information accurately and efficiently. In fact, joint IT development is one of our specialties. We maintain a full integration engineering staff in house. Third-party software clients can scan cards and documents and automatically capture customer images and data (such as name, address, numbers, ID number, group number, copay, and more) to modify or create the customer's profile in their software application. They can also modify an existing profile through scanning an ID card and capturing demographic data (such as height, weight, race, eye and hair color and more). If data isn't automatically captured, there is a simple drag and drop option to eliminate the necessary keystrokes and unintended transposition errors of manual data entry.

Our partners have the choice of integrating our powerful software products such as ScanSharp®, ScanOCR®, ScanSign® and others into their applications or we can do it for them. It's up to them. We are always available to help our partners. We know that the foundation of any great partnership is integrity, trust, and mutually beneficial results. We only succeed when our partners do. Our products exist to increase competitive functionality and overall profitability for our partners. Please contact us at [partners@inuvio.com](mailto:partners@inuvio.com) for more information about joining our VIP partner program today.

## About INUVIO

Welcome to INUVIO, the path to IT (Information Technology) innovation. INUVIO™ (formerly Innovative Card Scanning) is the original card and document scanning, imaging and OCR solution for the healthcare industry. Our solutions, such as MedicScan and ScanSharp® were created by a Doctor, Daniel J. Moulton, F.A.A.P., for Doctors and have been installed over 250,000 times since 2002. We have since evolved beyond card scanning and beyond healthcare into many new products and markets. Our solutions have been integrated into some of the largest PM and EHR systems in the world. We are proud to uphold our name's meaning and be a "path to innovation" in IT solutions. INUVIO is the most unique company in IT today. Look for our powerful and unique products such as ScanSharp®, ScanOCR® with our patent pending Local Templating™ functionality, ScanSign®, ScanGlobal®, ScanMedic®, ScanID®, EcoScan®, EcoSign® and others.
