

ScanOCR Thin Client is the latest development in Inuvio’s intelligent scanning software. Designed for larger enterprise environments, it is the perfect solution for enabling intelligent digital scanning throughout your healthcare system, large physician practice, office environments and labs.

The ScanOCR product family enables your practices to fully automate patient data capture, rapidly accelerating the speed and accuracy in processing all types of cards and documents and preventing unnecessary errors. Unlike other imaging solutions, INUVIO’s ScanOCR software doesn’t just take a picture of patient documents and cards, but actually “reads” each character and seamlessly auto-populates your PM (Practice Management) and EMR (Electronic Medical Record) systems with editable data.

ScanOCR Thin Client delivers all the advantages of intelligent scanning while performing all its computation on Inuvio’s ScanCloud service. By securely offloading expensive computation to our hardware, you can deliver faster and more accurate OCR results without the limitations of client-side data processing. As a result, ScanOCR Thin Client can be deployed on Terminal Servers, Citrix Servers and more, all without the costly capital investment of custom server hardware dedicated to OCR.

BENEFITS

- > READS INURANCE CARDS AND DRIVER’S LICENSES
- > ELIMINATES COPYING, TYPING & LABOR COSTS
- > CONVERTS PATIENT INFO INTO EDITABLE DATA
- > AUTO-POPULATES EMR/PM SYSTEMS
- > WORKS ON ANY WINDOWS COMPUTER
- > IDEAL FOR CITRIX / RDP THIN CLIENT ENVIRONMENTS
